

Gough Solicitors, Devizes

Challenge:

Located in central Devizes, the building provided the local office for a long established firm of solicitors. The old brick façade was delaminating in places and needed upgrading to present a more professional image.

Solution:

The existing façade was re-clad using Ibstock Fastwall™, a precision engineered composite of 20mm thick brick slips bonded to a patented backing. Specially-sized for this project, the panels enabled a new authentic brick finish to be provided with minimal disruption to the business. Two Ibstock Kevington concrete-backed semi-circular arches, mounted on concrete pillars behind the Fastwall™ panels, create a more distinctive and traditional visual, in keeping with the building's historical setting.
